Lecturer
Department of EEE

LaTeX

Table

There are three ways you can insert tables

1. Using the **Insert table button** in the editor toolbar.
2. Copying and pasting a table from another document while using Visual Editor.
3. Writing the LaTeX code for the table in Code Editor.

```latex
\begin{table}
    \centering
    \begin{tabular}{ccc}
        &  & \\
        &  & \\
        &  & \\
    \end{tabular}
    \caption{Caption}
    \label{tab:placeholder}
\end{table}
```

Table

1. Tables in are created using the **{table}** env…
2. Within this, the **{tabular}** environment is used
3. The letters **{l}**, **{c}**, and **{r}** define the alignment of the content in each **column**: **left**, **center**, and **right**, respectively.
4. ampersands (**&**) separate columns, and double backslashes (****) indicate the end of a row

```
\begin{table}
    \centering
    \begin{tabular}{ccc}
        &  & \\
        &  & \\
        &  & \\
    \end{tabular}
    \caption{Caption}
    \label{tab:placeholder}
\end{table}
```

Table

{|c|c|c|}

1. Declares that **three columns** are separated by a **vertical line**.
2. Each **c** means that the contents of that column will be **centered**.
3. Instead of **l**, **c**, and **r**, we can use **m**, **p**, and **b** for **middle**, **top,** and **bottom**.
4. For specific length, Ex: **{|c{2cm}| c{5cm}| c{1cm}|}**

   for this must use, **\usepackage{array}**

\hline

1. This will insert a horizontal line.

[Double Horizontal line and Double vertical line ???]

Table (Self Study)

Combining rows and columns

1. **\usepackage{multirow}**.
2. **\multicolumn** command to merge several columns.

- **Positioning tables**
- **Captions, labels, and references**
- **Coloring a table**

https://www.overleaf.com/learn/latex/Tables

Bibliography (Self Study)

1. First call the bib file. **\bibliography{sample}**.
2. Rest of the part study yourself:

On Uplink Throughput Analysis for LEO Satellite Communications [PDF] google.com

MI Mahdi, N Biswas

2023 8th International Conference on Computers and Devices for ..., 2023 · ieeexplore.ieee.org

In this paper, we analyze received throughput at the LEO satellite from the ground station, which would depend on transmission duration from the ground station as well as on the received power. Transmission duration is represented in terms of the satellite's visible time, whereas the received power becomes a function of slant range and hence the elevation angle. Numerical results are shown at the end for different parameters' values.

Lab Task 5

Make a full report (in the same format as the default LaTeX example). Including Sections, Sub-sections, Equations, Lists, Figures, Tables, and References (minimum 10).

In the lab report,
Add: Cover page

Result:
For code use, share (turn on link sharing) and provide the link in your report.
The result PDF must be added last.

Thank You
